IMPORTANT PRODUCT INFORMATION

Wedges

There will be two new wedges which will replace all of the current types of fastener wedges. These have more benefits and advantages.

Two Types – Narrow and Wide

The new designs are W19 “narrow” style and W24 “wide”. The base of each wedge is combined bevelled and flat. This in addition to a good lead on angle on the wedging spigot, allows one wedge to suit both flat and bevelled window frames.

Benefits

This new designs means - smoother closing of windows, reduced stockholding as one wedgewill suit all Basta and Shaw fasteners and spigot is longer which means better handgrip when operating.

The new wedge codes are W19 and W24 – all other codes will become obsolete – eg 1370WFLI3BP – will become 1370W19BP. These will be phased in during August 2008.

Pins

There will be two new pins - P23 (Flat Pin with 13 mm screwhole backset) and P27 (9° Bevel with 13mm screwhole backset). These will join the existing Basta Pins PEJ 12 and PFL 12. These four Pins will suit flat or bevelled window sections and also 16mm and 20mm stay backset. The pins suit both Shaw and Basta type Casement Stays and come in all the specified finishes.

These will be phased in during August 2008. All other pins and wedges will become obsolete as stocks are exhausted. If you need any information contact our Sales Team on 01473225225.
